

# Barrier-free accessibility for children

Safe entrances and exits.  
Threshold-free comfort at any age.

### Every day

in nursery schools, daycare centres, kindergartens and schools 1,000 little children's legs walk, run, ride, jump or bounce through doors ... back and forth ... in and out.

### Inclusion

Means that all children have the possibility to participate in all activities and have the same opportunities. To ensure that this happens right from the start, nursery schools, daycare centres, kindergartens and schools must be barrier-free. However, this means: **no barriers, no obstacles and no tripping hazards**, just like the nursery school in Valley/Bavaria, which was completely equipped with ALUMAT's Magnetic Zero Thresholds.

## Fun & Safety

The most important basic condition for caregivers and children are practical, functional, robust and above all safe materials.

„ Children run and frolic around all day. Especially in daycare centres, they must be able to move freely and safely. But even the smallest threshold can quickly turn into a tripping hazard. **We are very satisfied with our doors and ALUMAT's Zero Thresholds**, which we installed in 2008. “

Maria Trömer, Pre-school teacher,  
Head of Kinderstube Valley

### No more tripping hazards

With ALUMAT's Magnetic Zero Thresholds entrance, terrace and balcony doors transform into elegant and, above all, safe barrier-free doorways. No matter whether the doors are made of wood, PVC or aluminium. ALUMAT's zero thresholds comply with the European Accessibility Act.

„ Since 2007 we only install ALUMAT's zero threshold when it comes to barrier-free doors. Because reliable barrier-free accessibility can only lead to complete satisfaction of our customers when implemented with empathy, know-how, first-class products and the best workmanship. The ALUMAT system is the only one I know of that is one hundred percent leak-proof, even with driving rain. “

Josef Moller,  
Master Carpenter, Vogl Fenster

„ Already in 2008 the installation of ALUMAT's Zero Threshold in the first kindergarten proved to be the right decision. Due to the good and long term experience, there was no other solution for us, when we started with the extension in 2017. “

Emmeran Limmer,  
Engineer FH Architect Valley
