

# Hospital and Rehabilitation **barrier-free**

... no doubt about this

HOSPITAL | REHABILITATION | NURSING AND CARE

The hospital “Klinik im Alpenpark” in Bad Wiessee (Germany), on the lake Tegernsee has always been keen to provide its patients with the greatest possible comfort in terms of a barrier-free design. In order to avoid any tripping hazard, selected doorways leading to the outside were equipped with **ALUMAT’s Magnetic Zero Threshold**.

### Some good reasons for choosing ALUMAT

- ✓ Long-term proven, being 20 years ahead in development and research
- ✓ Global pioneer in the area of zero thresholds with sophisticated technical know-how
- ✓ High thermal insulation properties and highest tightness classification for driving rain resistance (at least class 9A) and air permeability (class 4) – also with double wing doors.
- ✓ Installation also possible in exposed locations without additional gutter and canopy
- ✓ Tested sound insulation up to 46 dB
- ✓ Comfortable and ergonomic doorway which offers best prevention of trips and falls
- ✓ Equally suitable for new buildings and renovation projects

### Minimizing thresholds, maximizing safety

With **ALUMAT's Magnetic Zero Thresholds** entrance, terrace and balcony doors transform into elegant and, above all, safe barrier-free doorways. For lift-and-slide doors, ALUMAT offers the flattest guide rail with 3.5 mm. Regardless of whether the doors are made of wood, PVC or aluminium – Zero Thresholds made by ALUMAT comply with the European guidelines for accessibility – particularly important in the hospital and care sector.

” After an accident, a disease or surgery, the body is weakened and unstable. In order to be able to cope with everyday life independently again, a complication-free recovery is an essential requirement. Apart from the best possible medical and therapeutic care, the environment and the barrier-free architectural design play an equally important role. “

Dr. Susanne Götschl,  
Deputy Head of Department/Klinik am Alpenpark

” In the hospital and rehabilitation sector, well-designed, reliable accessibility is essential. ALUMAT's Zero Thresholds are not only ideal for our patients, they also make the workflow of our nursing staff much easier. Our patients appreciate the unrestricted and great comfort, as they can also reach the outside area independently and safely. “

Stefan Schneider, Management Team/Klinik am Alpenpark

” As a wheelchair user, I experience day by day how even the smallest threshold makes everyday life more difficult. As an expert for barrier-free construction, I cannot understand why people still don't build without barriers which also reflects the latest state of the art. “

Kornelia Grundmann,  
gabana - Agentur für Barrierefreiheit
